1. While the DOGE case study is interesting, the paper could benefit from a deeper analysis of the specific challenges and outcomes of their modernisation efforts. More details on the technologies used, the implementation process, and the results achieved would be valuable
2. The paper discusses AI and Agile methodologies, but it could explore their integration in more detail. How can Agile practices be adapted to facilitate AI implementation in legacy systems? What are the best practices for managing this integration?
3. The future research directions could be more specific and actionable

There are instances where the language could be more precise and the writing clearer. A thorough review for grammar and style would be beneficial
